FOREIGN BROADCAST INFORMATION SERVICE

Of Special Interest This Week

+ In early January, the S&T Center responded to a request from the Office of Science and Technology Policy/White House and forwarded to them some 250 pages of material on European R&D projects dealing with transport technologies. Much of the material came from data base searches by the Antwerp and Milan S&T Units, which provided information on the centerpiece of these projects, the PROMETHEUS program. The searches also yielded information on related R&D efforts in the fields of digital mapping of continental road networks and satellite communications between transport information centers and road vehicles.
